ISM3232C
Module 3 Project: Building a Web Application With TypeScript (Part 2)

Instructions

For this assignment you will continue Lab 3, beginning with the section titled 'Configuring the TypeScript compiler', and completing up through the step 'Removing a single todo item'.

If you use the Horizon system, all required software is pre-installed and configured.

There is no Canvas submission for this project, you will submit your work to a GitHub repository as described below.

Submitting your work

Once your project is complete, commit your files (source code and a snip of the execution) to the classroom repository for this assignment. I will clone and grade your repo after the due date.
